2. `SELECT count(*) FROM vets where trim(state) = state;` implies that only a small number of records have state values without leading or trailing whitespace. Most rows contain extra spaces, indicating that the data requires cleaning before it can be reliably used.

3. There were 83 empty rows.

9. `SELECT fname AS "First Name", lname AS "Last Name", town, state FROM vets WHERE state = 'GU' ORDER BY lname;`

10. The problems are the CSV header row was loaded as data and quotation marks were included in the field values.
